

Geneconverter 400

For heavy weights and hefty profit

The Geneconverter 400 is a Hampshire based sire line with up to 200g/day higher than average feed intake. It's ability to maintain good levels of efficiency, leads to fast growth even up to heavy weights and easily reaches 120kg. This coupled with low mortality, in part due to improved E.Coli resistance, which reduces incidence of scour and increasing piglet survival, means the Geneconverter 400 delivers fast growth and an even faster profit.

Nucleus Performance

	Top 10%	Top 20%
Pre-test Gain (g/day)	670	615
Days to 40kg	59	64
Gain on Test (g/day)	1300	1240
Ribfat 100kg (mm)	9.2	10.1
Muscle Depth 100kg (mm)	80.1	78.1
Days to 100kg	128	133

Trial Data

	GC400
Birth Weight (kg)	1.68
Weaning Weight (kg)	7.96
Weaning Age (days)	26.4
Liveweight (kg)	103.8
Growth Wean/Slaughter (g/day)	826
Carcase Weight (kg)	78.1
P2 (mm)	11.2
Killing Out %	75.24

Don't just take our word for it...

“ Since moving to the Geneconverter 400 a key requirement for our business has been stronger, viable piglets in the farrowing house which in turn results in excellent weaning weights. Once weaned, the piglets never stop growing and this has helped me to dramatically lower my days to bacon. I supply pigs to local high quality outlets and these establishments are extremely impressed with the carcass and meat quality that the Geneconverter 400 produces. ”

Dennis Bridgeford, Petley Hybrids
