

Genepacker 150

The Genepacker 150 is a white, robust female, tough enough to cope in challenging production systems whether indoor or outdoor. This genuine F1 sow ensures maximum heterosis and excellent reproductive performance, utilising white Duroc genetics to provide strength and robustness without impacting on the choice of sire lines. The Genepacker 150 generates profit from any pig production system.

Commercial Performance

	GP150	UK Average*
Farrowing Rate (%)	89.1	80.3
Born Alive	12.5	11.4
Weaned	11.0	9.9
Pre Weaning Mortality (%)	12.1	12.4
Weaning Age	24.1	26.7
Pigs Weaned/Sow/Year	25.3	22.6

* Taken from table 4.3 from BPEX Pig Yearbook 2012 page 45.

Don't just take our word for it...

“ For over 10 years the GP150 has continued to perform prolifically, showing excellent mothering abilities. The challenges we face in rearing animals can be tough – our location requires the animals to be able to cope with variable and difficult outdoor weather conditions. Being a weaner producer, the number of pigs weaned per sow, per year along with their weights is vital to the success of our business. We have steadily expanded the size of our business even in these challenging times because the Genepacker 150 has allowed us to do so. ”
